REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: applicant recites a releasable retarder for resisting movements of railway cars moving along a railroad track. The retarder is comprised of first and second shoe beams supported adjacent to rails of the railroad track, a plurality of shoes carried by the shoe beams in a parallel, spaced relation with the first and second rails, a bias structure biasing the shoe beams towards the rails thereby trapping the wheels of the railway car between the shoe beam and the rail and applying a frictional force to slow or stop the cars. The system is further comprised of a bidirectional operating mechanism operable in a release mode for moving the shoe beams inwardly, away from the rails. The shoe beams are moved to the release mode from a home position where the shoe beams are positioned to engage the car wheels. The operating mechanism also moves the shoe beams to a service position between the home position and release position which allows for the insertion of shimming elements. The shimming elements, limits the travel of the shoe beams such that the shoe beams are repositioned in an adjusted position outwardly of the home position closer to the running rails, thereby compensating for wear on the shoes.

The prior art made of reference, taken singularly or in combination, does not adequately disclose the features recited in the instant claims.

Specifically, the prior art of Zhukov et al (US 5,029,675), Bodkin (US 5,388,525), Gutknecht (US Re. 36,084) and Ragsdale (US 5,967,051) all disclose systems for stopping or slowing a vehicle using a retarder. Gutknecht and Ragsdale et al show shoe

beams that clamp a plate that hangs below the undercarriage of a vehicle. Neither of these reference show the beams to come in contact with the wheels of the vehicle, nor do they show a service position for adding parts to the retarder as recited in the instant claims. Zhukov et al and Bodkin show a retarder system using beams to come in contact with the vehicle wheels and clamp them between the beam and the rail. However, neither reference discloses an intermediate service position for adjusting the beams to compensate for wear on the break shoes as recited in the instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Reasons for Allowance."
